

BAHMÜLLER expands Planning for the construction of a new assembly hall successfully started

At the end of the 2nd quarter of 2021, BAHMÜLLER is expected to start the construction of a further assembly hall at the headquarters in Plüderhausen. With the expansion of the assembly areas BAHMÜLLER continues the successful development of the last years.

More than 75 years ago, Wilhelm Bahmüller Maschinenbau Präzisionswerkzeuge GmbH was founded in Plüderhausen. Since then, the product portfolio has been continuously developed and today ranges in the three divisions from precision grinding machines for ultra-fine machining of the smallest components, to fully automated and interlinked processing lines for corrugated board converting, to individual special fixtures for precision tools in modern machining centers.

Today, BAHMÜLLER is one of the absolute market and technology leaders worldwide in its three highly specialized business segments and has established a strong market position in recent years.

BAHMÜLLER has been able to profit from a dynamic packaging market, especially in the Corrugated Board Converting division, and has generated a large order intake over the last few years. In order to be able to continue to supply our customers on time, the further expansion of the areas is required.

Already in 2013, a new logistics center has been inaugurated on the company premises. In 2018, another assembly hall was put into operation and the move into the new 1,700 sqm assembly and demonstration hall is planned for the beginning of 2022.

With this additional space, BAHMÜLLER is well equipped for the future and thus also makes a clear statement for the Plüderhausen location.
