

**FEFCO Award „Innovation Prize in Bronze“ for
Bahmüller****POWERPACKER convinces at this year's FEFCO Congress in
Copenhagen**

At the final day of this year's event in Denmark's capital, Copenhagen, the FEFCO Award Jury awarded three prizes out of 50 Spotlights, as the short video presentations are called. Bahmüller was leading with its POWERPACKER and won as the only machinery manufacturer the much-coveted Innovation Prize.

The POWERPACKER can be adapted to most all specialty folder gluers. Automatic collating of nearly all box styles into bundles and strapping them enables maximum productivity all the way up to the maximum machine speed of the specialty folder gluer. The POWERPACKER was developed, build and tested in dialogue with customers and Bahmüller's engineering team. „It was a challenge which panned out nicely and exceeded all of our expectations “, a joyous Ulrich Wolz, Managing Director of Corrugated Machinery Systems, exclaimed.

However, not just the Packer Solution received praise. Also the latest generation of the specialty folder gluer TURBOX II received honorable mention at FEFCO in regards to „Zero Defect Technology“ by which out of spec boxes are being ejected at machine speed utilizing the UNIQUE EJECT System. For Bahmüller it is a further step to strengthen its position in the marked, delivering dependable and sustainable solutions and products that meet a high demand on quality.
