

PRESS RELEASE**BAHMÜLLER TURBOX conquers France**

Yes we can!
Would a famous American tell to the audience.

Of course – we did!
Is finally the statement of BAHMÜLLER.

February 2015 - first TURBOX speciality folder gluer line is installed in France.

Family owned company CARTONNAGE VIALON et Cie. in Saint-Just-Malmont Dep Haute-Loire decided 2014 to invest in German technology.

Not only a TURBOX with TOPMATCHER has been installed, also the state-of-the-art POWERPACKER II system found its place inside the factory.

The TURBOX LINE will run adjacent to existing multipoint gluer and several flatbed die-cutters next to Inline machines different sizes.

Equipped with a TOPMATCHER feeder the machine will produce shelf ready packaging boxes in several versions at unmatched speed and quality.

The TURBOX is equipped with the latest innovations from BAHMÜLLER, including a set-up time reduction kit and additional tooling. Unmatched simplicity at BOXFLOW®CONTROL HMI led to a short training period, thanks to the operators who used to work with other brand SFG.

Overall the machine is prepared for sustainable production at highest quality level with integrated glue control and UNIQUE EJECT system to discharge faulty

boxes. An essential kit in conjunction with the automatic POWERPACKER.

UNIQUE FOLD – servo controlled rotation hook – enables the designers of VIALLON to offer further solutions to their customers. A further step to customer satisfaction.

The new BAHMÜLLER TURBOX completes the excellent equipment of VIALLON and marks the continuous improvements and sustainable investment, Mr Christian VIALLON is well known for.

If quality and short delivery is the key to success, production must be ready to keep pace with the expectations.
